

Installation Document For Automated Whatsapp

1. Ensure python 3.7 or above is installed in your system otherwise Download and install it from the following link with adding path to the Environment variables option.

Link : <https://www.python.org/downloads/>

2. Install selenium module by using the following command in command prompt.

“pip install selenium”

3. Install schedule module using the following command.

“pip install schedule”

4. Install Autoit module using the following command.

“pip install -U pyautoit”

5. Clone the git repository using the following command or download the entire zip folder and extract it to desktop or any other location.

git clone https://github.com/deepak-0310/Automated_Whatsapp.git

6. Change the path of the webdriver in line 26 of selenium_wh.py file to the path of webdriver in chromedriver.exe in chromedriver_win32 folder.

If it doesn't work download the webdriver suites to your chrome based on the version of chrome by the following link:

<https://chromedriver.chromium.org/downloads>

7. Now everything is ready to execute the automated whatsapp.

8. If you need to send any files or images or videos add them to the documents folder in the Main project folder.
